fine Weather we will however do that
before we bring the stores round in the boat
but how are we to make the salt pan
ready we must cut it out of the solid rock.
Mr. Master William but I have three or four
of what they call cold chisels – those short
thick pieces of iron with one end sharpened
to pick are in the storehouse – and with one of
them and a hammer we shall get on faster than
you think for the coral rock although
hard at the surface is very soft a little
below it the whole of that day was
occupied in fixing up the Cocoa nut
branches and wood ready made a square
stack like a haystack with a gable top
over which he tied the long branches so
that the rain would pour off it.
there said Ready as he came down the ladder
that will be our provision for next year
we have quite enough left to go on with
till the rainy season is over and we shall
have no difficulty in
