

A TRUTHFUL AND CHEAP BAROMETER.—Take a clean glass bottle and put in it a small quantity of finely powdered alum. Then fill the bottle with spirits of wine. The alum will be perfectly dissolved by the alcohol, and in clear weather the liquid will be as transparent as the purest water. On the approach of rain or cloudy weather, the alum will be visible in a flaky spiral round the centre of the fluid, rising from the bottom to the surface. This is a cheap, simple, and beautiful barometer, and is placed within the reach of all who wish to possess one. For simplicity of construction, this is altogether superior to the frog barometer in general use in Germany.
